Quality Marking Services Limited is a professional and innovative Highway Markings and High Friction Surfacing Contractor operating throughout the South West of England.

The company is accredited to ISO 9001: 2000 incorporating Sector Scheme No. 7 for Road Markings as well as being a British Board of Agreement Approved Installer for Type 1 Epoxy Resin High Friction Surfacing.

We are committed to quality workmanship and continuous improvement through a dedicated workforce who receive specific training combined with regular competence assessments with the objective of attaining industry NVQ qualifications. All employees are CSCS registered.

We have specialist equipment to apply conventional hot thermoplastic highway markings and environmentally friendly, solvent free, waterborne acrylic paints for the maintenance of existing highways markings that provide an economic alternative solution to restoring high levels of retro-reflectivity to 'tired' poorly performing raised rib edge line markings without material 'build up'.

We also use Waterborne Acrylic Paints for colour coating tennis courts, running tracks, etc.

We are an approved installer for Premark Preformed Thermoplastic for high performance, durable highway markings in high stress situations as well as unique designs for school playground markings.

We also install decorative and imprinted surfacing materials for traffic calming and highway enhancement schemes.

Quill Falcon designs, manufactures and supplies revolutionary dustless blasting systems for a vast range of applications world-wide

The patented Quill Falcon Dustless Kwikblast® System offers unrivalled precision and control during the blasting process, performing both delicate precision controlled operations involving removing one coat of paint at a time from surfaces to heavier more demanding applications of cutting through concrete for repairs, etchings or demolition purposes.

The Quill Falcon Kwikblast® System blasts away permanent and temporary thermoplastic paint, temporary road marking tape, surface dressing emulsion, resin based paints and anti skid surfacing from both the surface and voids from within the road surface. The system exceeds all previous thermoplastic removal methods, as there is no dust, no smoke, no scars and no scorching of the road surface.
